"The South 40" by JAMES A. SMITH EXTENSION AGENT

A recent report shows that 85 percent of new planters purchased in the corn belt are plateless. Rough estimates show that 50 percent of all the corn acreage planted in the Corn Belt during the 1976 season was planted with plateless planters.

Four major equipment manufacturers Allis-Chalmers, International, John Deere and White, now market plateless planters.

It will be interesting to watch the trend in this areas as old planters are replaced.

Don't forget this Saturday the Red House Senior Bull Sale will be held at 12 noon. There will be 38 angus, 22 polled hereford, 4 charolais and two simmental bulls offered.

This a group of bulls that we we can recommend to you. In the angus group, nine weighed 1,000 lbs. or better at a year old and 24 weighted 900 lbs.+. For example, there is one bull that was not creep fed and weaned at 596 lbs. and weighed 1,018 as a yearling. This tells you something about the milking ability of his mother and something about his ability to gain on his own.

In the polled herefords, four weighted 1000 lbs. plus as yearlings and 15 were at 900 plus. One of these bulls had a 205 adjusted weight of 760 lbs and a yearling weight of 1,113 lbs.

By the third quarter of this year it is expected to see the cattle situation turned around. Now may be an excellent opportunity to take home the bull that will sire your calves three years from now.

Last year atrazine, alone or in combination with other herbicides, was used on 90% of the corn and 50% of the sorghum planted in Virginia. Until 1976 atrazine was available under only one brand name. Presently atrazine is registered for sale under eight different brand names.

Some difficulties were reported with some of these products last year. Apparently most of the problems could have been resolved if the label had been **read and followed.**

Relative yields are a quick way of determining the performance of corn hybrids relative to competing hybrids. We've recently received a copy of the state average relative yeilds. This compares varieties tested in at least three of the six test locations in Virginia. In reviewing it I find seven varieties with yeilds 10% above the state average and with at least 95% ereetness.
